

I agree with and support the Comment submitted by The American Radio Relay League concerning Docket ET 03-104. Further research about Broadband over Power Line BPL is needed to rule out the possibility that irreparable interference to services operating in the 2 MHz - 80 MHz frequency range will occur. To date, I have not been able to obtain any credible scientific data pertaining to the comments made by the proponents of BPL.

Quick approval of ET 03-104 without more research holds the risk of creating a interference nightmare that could impact our national security by impeding emergency communication.
